Bioconjugate Techniques

Greg T. Hermanson

Pierce Chemical Company
Rockford, Illinois

Academic Press

San Diego New York Boston London Sydney Tokyo Toronto

Front cover illustration: A DNA double helix chemically modified at the N2 of a guanine residue to possess a γ -aminobutyric acid (GABA) group. The molecular model was kindly provided by Dr. George Pack of the University of Illinois College of Medicine at Rockford.

This book is printed on acid-free paper. ☹

PART I Bioconjugate Chemistry

1. Functional Targets	
1. Modification of Amino Acids, Peptides, and Proteins	3
1.1. Protein Structure Reactivity	4
Amino Acids	4
Nucleophilic Reactions and the pI of Amino Acid Side Chains	12
Secondary, Tertiary, and Quaternary Structure	17
Prosthetic Groups, Cofactors, and Post-translational Modifications	19
Protecting the Native Conformation and Activity of Proteins	21
1.2. Protein Cross-linking Methods	23
2. Modification of Sugars, Polysaccharides, and Glycoconjugates	27
2.1. Carbohydrate Structure and Function	27
Basic Sugar Structure	27
Sugar Functional Groups	29
Polysaccharide and Glycoconjugate Structure	34
2.2. Carbohydrate Cross-linking Methods	39
3. Modification of Nucleic Acids and Oligonucleotides	40
3.1. Polynucleotide Structure and Function	41
Nucleotide Functional Groups	42
RNA and DNA Structure	53
3.2. Polynucleotide Cross-linking Methods	55
4. Creating Specific Functional Groups	56
4.1. Introduction of Sulfhydryl Residues (Thiolation)	56
Modification of Amines with 2-Iminoethanol (Traut's Reagent)	57
Modification of Amines with SATA	60
Modification of Amines with SATP	63
Modification of Amines with SPDP	64
Modification of Amines with SMPT	66
Modification of Amines with N-Acetylmethionine thioester	68
Modification of Amines with SAMSA	70

Detailed Contents

Modification of Aldehydes or Ketones with AMBH	71
Modification of Carboxylates or Phosphates with Cystamine	72
Use of Disulfide Reductants	76
Ellman's Assay for the Determination of Sulfhydryls	88
4.2. Introduction of Carboxylate Groups	90
Modification of Amines with Anhydrides	90
Modification of Sulfhydryls with Iodoacetate	98
Modification of Hydroxyls with Chloroacetic Acid	100
4.3. Introduction of Primary Amine Groups	100
Modification of Carboxylates with Diamines	101
Modification of Sulfhydryls with N-(β -Iodoethyl)trifluoroacetamide (Aminoethyl-8)	104
Modification of Sulfhydryls with Ethylenimine	105
Modification of Sulfhydryls with 2-Bromoethylamine	106
Modification of Carbohydrates with Diamines	107
Modification of Alkylphosphates with Diamines	109
Modification of Aldehydes with Ammonia or Diamines	109
Introduction of Arylamines on Phenolic Compounds	110
Amine Detection Reagents	112
4.4. Introduction of Aldehyde Residues	114
Periodate Oxidation of Glycols and Carbohydrates	114
Oxidase Modification of Sugar Residues	116
Modification of Amines with NHS-Aldehydes (SFB and SFPA)	117
Modification of Amines with Glutaraldehyde	118
4.5. Introduction of Hydrazone Functional Groups	120
Modification of Aldehydes with Bis-hydrazone Compounds	121
Modification of Carboxylates with Bis-hydrazone Compounds	123
Modification of Alkylphosphates with Bis-hydrazone Compounds	124
5. Blocking Specific Functional Groups	125
5.1. Blocking Amine Groups	126
Sulfo-NHS Acetate	127
Acetic Anhydride	127
Citraconic Anhydride	128
Maleic Anhydride	129
5.2. Blocking Sulfhydryl Groups	129
N-Ethylmaleimide	130
Iodoacetate Derivatives	131
Sodium Tetrathionate	131
Ellman's Reagent	132
Dipyridyl Disulfide Reagents	133
5.3. Blocking Aldehyde Groups	134
Reductive Amination with Tris or Ethanolamine	135
5.4. Blocking Carboxylate Groups	136
Tris or Ethanolamine plus EDC	136
2. The Chemistry of Reactive Groups	
1. Amine-Reactive Chemical Reactions	137
1.1. Isothiocyanates	138
1.2. Isocyanates	138
1.3. Acyl Azides	139

Detailed Contents

xi

1.4. NHS Esters	139
1.5. Sulfonyl Chlorides	140
1.6. Aldehydes and Glyoxals	141
1.7. Epoxides and Oxiranes	142
1.8. Carbonates	142
1.9. Arylating Agents	143
1.10. Imidoesters	143
1.11. Carbodiimides	144
1.12. Anhydrides	145
2. Thiol-Reactive Chemical Reactions	146
2.1. Haloacetyl and Alkyl Halide Derivatives	147
2.2. Maleimides	148
2.3. Aziridines	148
2.4. Acryloyl Derivatives	149
2.5. Arylating Agents	149
2.6. Thiol-Disulfide Exchange Reagents	150
Pyridyl Disulfides	151
TNB-Thiol	151
Disulfide Reductants	152
3. Carboxylate-Reactive Chemical Reactions	152
3.1. Diazoalkanes and Diazoacetyl Compounds	153
3.2. Carbonyldiimidazole	153
3.3. Carbodiimides	154
4. Hydroxyl-Reactive Chemical Reactions	154
4.1. Epoxides and Oxiranes	155
4.2. Carbonyldiimidazole	155
4.3. <i>N,N'</i> -Disuccinimidyl carbonate or <i>N</i> -Hydroxysuccinimidyl chloroformate	156
4.4. Oxidation with Periodate	156
4.5. Enzymatic Oxidation	157
4.6. Alkyl Halogens	158
4.7. Isocyanates	158
5. Aldehyde- and Ketone-Reactive Chemical Reactions	159
5.1. Hydrazine Derivatives	159
5.2. Schiff Base Formation	159
5.3. Reductive Amination	160
5.4. Mannich Condensation	160
6. Active Hydrogen-Reactive Chemical Reactions	161
6.1. Diazonium Derivatives	161
6.2. Mannich Condensation	162
6.3. Iodination Reactions	162

7. Photoreactive Chemical Reactions	163
7.1. Aryl Azides and Halogenated Aryl Azides	163
7.2. Benzophenones	164
7.3. Certain Diazo Compounds	164
7.4. Diazirine Derivatives	165

PART II

Bioconjugate Reagents

3. Zero-Length Cross-linkers

1. Carbodiimides	169
1.1. EDC	170
1.2. EDC plus Sulfo-NHS	173
1.3. CMC	177
1.4. DCC	177
1.5. DIC	180

5. Homobifunctional Photoreactive Cross-linkers	214
5.1. BASED	214
6. Homobifunctional Aldehydes	214
6.1. Formaldehyde	215
6.2. Glutaraldehyde	218
7. Bis-epoxides	220
7.1. 1,4-Butanediol Diglycidyl Ether	221
8. Homobifunctional Hydrazides	222
8.1. Adipic Acid Dihydrazide	222
8.2. Carbohydrazide	223
9. Bis-diazonium Derivatives	224
9.1. o-Tolidine, Diazotized	224
9.2. Bis-diazotized Benzidine	225
10. Bis-alkylhalides	226
5. Heterobifunctional Cross-linkers	
1. Amine-Reactive and Sulfhydryl-Reactive Cross-linkers	229
1.1. SPDP, LC-SPDP, and Sulfo-LC-SPDP	230
1.2. SMPT and Sulfo-LC-SMPT	232
1.3. SMCC and Sulfo-SMCC	235
1.4. MBS and Sulfo-MBS	237
1.5. SIAB and Sulfo-SIAB	239

1.8. SIAX and SIAXX	245
1.9. SIAC and SIACX	247
1.10. NPIA	247
2. Carbonyl-Reactive and Sulfhydryl-Reactive Cross-linkers	248
2.1. MPBH	249
2.2. M ₂ C ₂ H	250
2.3. PDPH	252
3. Amine-Reactive and Photoreactive Cross-linkers	252
3.1. NHS-ASA, Sulfo-NHS-ASA, and Sulfo-NHS-LC-ASA	255
3.2. SASD	256
3.3. HSAB and Sulfo-HSAB	260
3.4. SANPAH and Sulfo-SANPAH	261
3.5. ANB-NOS	263
3.6. SAND	263
3.7. SADP and Sulfo-SADP	265

3.8. Sulfo-SAPB	266
3.9. SAED	268
3.10. Sulfo-SAMCA	270
3.11. <i>p</i> -Nitrophenyl Diazopyruvate	272
3.12. PNP-DTP	274
4. Sulfhydryl-Reactive and Photoreactive Cross-linkers	275
4.1. ASIB	276
4.2. APDP	277
4.3. Benzophenone-4-iodoacetamide	279
4.4. Benzophenone-4-maleimide	280
5. Carbonyl-Reactive and Photoreactive Cross-linkers	282
5.1 ABH	282
6. Carboxylate-Reactive and Photoreactive Cross-linkers	283
6.1 ASBA	284
7. Arginine-Reactive and Photoreactive Cross-linkers	284
7.1 APG	285
6. Trifunctional Cross-linkers	
1. 4-Azido-2-nitrophenylbiocytin-4-nitrophenyl ester	287
2. Sulfo-SBED	289
7. Cleavable Reagent Systems	
1. Cleavage of Disulfides by Reduction	293
2. Periodate-Cleavable Glycols	294
3. Dithionite-Cleavable Diazo Bonds	295
4. Hydroxylamine-Cleavable Esters	295
5. Base Labile Sulfones	296
8. Tags and Probes	
1. Fluorescent Labels	298
1.1. Fluorescein Derivatives	302
Amine-Reactive Fluorescein Derivatives	303
Sulfhydryl-Reactive Fluorescein Derivatives	307
Aldehyde/Ketone- and Cytosine-Reactive Fluorescein Derivatives	312
1.2. Rhodamine Derivatives	316
Amine-Reactive Rhodamine Derivatives	317
Sulfhydryl-Reactive Rhodamine Derivatives	326
Aldehyde/Ketone- and Cytosine-Reactive Rhodamine Derivatives	328

4.5. Iodinatable Modification and Cross-linking Agents	411
Bolton-Hunter Reagent	412
Iodinatable Bifunctional Cross-linking Agents	415

PART III**Bioconjugate Applications**

9. Preparation of Hapten-Carrier Immunogen Conjugates	
1. The Basis of Immunity	419
2. Types of Immunogen Carriers	421
2.1. Protein Carriers	421
KLH	422
BSA and cBSA	423
Thyroglobulin and OVA	426
Tetanus and Diphtheria Toxoids	427
2.2. Liposome Carriers	427
2.3. Synthetic Carriers	428
3. Carbodiimide-Mediated Hapten-Carrier Conjugation	429
4. NHS Ester-Mediated Hapten-Carrier Conjugation	436
5. NHS Ester-Maleimide Heterobifunctional Cross-linker-Mediated Hapten-Carrier Conjugation	439
6. Active-Hydrogen-Mediated Hapten-Carrier Conjugation	446
6.1. Diazonium Conjugation	446
6.2. Mannich Condensation	449
7. Glutaraldehyde-Mediated Hapten-Carrier Conjugation	453
8. Reductive-Amination-Mediated Hapten-Carrier Conjugation	454
10. Antibody Modification and Conjugation	
1. Preparation of Antibody-Enzyme Conjugates	460
1.1. NHS Ester-Maleimide-Mediated Conjugation	461
Activation of Enzymes with NHS Ester-Maleimide Cross-linkers	461
Conjugation with Reduced Antibodies	463
Conjugation with 2-Iminothiolane-Modified Antibodies	465
Conjugation with SATA-Modified Antibodies	467
1.2. Glutaraldehyde-Mediated Conjugation	470
1.3. Reductive-Amination-Mediated Conjugation	472
Activation of Enzymes with Sodium Periodate	474
Activation of Antibodies with Sodium Periodate	475
Conjugation of Periodate-Oxidized HRP to Antibodies by Reductive Amination	475
Conjugation of Periodate-Oxidized Antibodies with Amine or Hydrazide Derivatives	476

1.4. Conjugation Using Antibody Fragments	478
Preparation of F(ab') ₂ Fragments Using Pepsin	479
Preparation of Fab Fragments Using Papain	480
1.5. Removal of Unconjugated Enzyme from Antibody-Enzyme Conjugates	483
Immunoaffinity Chromatography	484
Nickel-Chelate Affinity Chromatography	486
2. Preparation of Labeled Antibodies	487
2.1. Fluorescently Labeled Antibodies	488
2.2. Radiolabeled Antibodies	490
2.3. Biotinylated Antibodies	492
11. Immunotoxin Conjugation Techniques	
1. Properties and Use of Immunotoxin Conjugates	496
2. Preparation of Immunotoxin Conjugates	499
2.1. Preparation of Immunotoxin Conjugates via Disulfide Exchange Reactions	503
Pyridyldisulfide Reagents	503
Use of Cystamine, Ellman's Reagent, or S-Sulfonate	514
2.2. Preparation of Immunotoxin Conjugates via Amine- and Sulfhydryl-Reactive Heterobifunctional Cross-linkers	516
SIAB	517
SMCC	519
MBS	522
SMPB	524
2.3. Preparation of Immunotoxin Conjugates via Reductive Amination	524
Periodate Oxidation of Glycoproteins Followed by Reductive Conjugation	525
Periodate-Oxidized Dextran as Cross-linking Agent	525
12. Preparation of Liposome Conjugates and Derivatives	
1. Properties and Use of Liposomes	528
1.1. Liposome Morphology	528
1.2. Preparation of Liposomes	531
1.3. Chemical Constituents of Liposomes	533
1.4. Functional Groups of Phospholipids	539
2. Derivatization and Activation of Lipid Components	540
2.1. Periodate Oxidation of Liposome Components	541
2.2. Activation of PE Residues with Heterobifunctional Cross-linkers	542
3. Use of Glycolipids and Lectins to Effect Specific Conjugations	548
4. Antigen or Hapten Conjugation to Liposomes	549
5. Preparation of Antibody-Liposome Conjugates	552

6. Preparation of Biotinylated or Avidin-Conjugated Liposomes	553
7. Conjugation of Proteins to Liposomes	556
7.1. Coupling via the NHS Ester of Palmitic Acid	556
7.2. Coupling via Biotinylated Phosphatidylethanolamine Lipid Derivatives	558
7.3. Conjugation via Carbodiimide Coupling to Phosphatidylethanolamine Lipid Derivatives	559
7.4. Conjugation via Glutaraldehyde Coupling to Phosphatidylethanolamine Lipid Derivatives	560
7.5. Conjugation via DMS Cross-linking to Phosphatidylethanolamine Lipid Derivatives	562
7.6. Coupling via Periodate Oxidation Followed by Reductive Amination	562
7.7. Coupling via SPDP-Modified Phosphatidylethanolamine Lipid Derivatives	564
7.8. Coupling via SMPB-Modified Phosphatidylethanolamine Lipid Derivatives	565
7.9. Coupling via SMCC-Modified Phosphatidylethanolamine Lipid Derivatives	566
7.10. Coupling via Iodoacetate-Modified Phosphatidylethanolamine Lipid Derivatives	567
 13. Avidin-Biotin Systems	
1. The Avidin-Biotin Interaction	570
2. Use of Avidin-Biotin in Assay Systems	572
3. Preparation of Avidin or Streptavidin Conjugates	575
3.1. NHS Ester-Maleimide-Mediated Conjugation Protocols	575
3.2. Periodate Oxidation/Reductive Amination Conjugation Protocols	580
3.3. Glutaraldehyde Conjugation Protocol	583
4. Preparation of Fluorescently Labeled Avidin or Streptavidin	584
4.1. Modification with FITC	585
4.2. Modification with Lissamine Rhodamine B Sulfonyl Chloride	586
4.3. Modification with AMCA-NHS	587
4.4. Conjugation with Phycobiliproteins	588
5. Preparation of Hydrazide-Activated Avidin or Streptavidin	589
6. Biotinylation Techniques	590
7. Determination of the Level of Biotinylation	591

Detailed Contents

2.4. Hydrazide-Activated Enzymes	637
2.5. SPDP-Activated Enzymes	637
3. Preparation of Biotinylated Enzymes	637
17. Nucleic Acid and Oligonucleotide Modification and Conjugation	
1. Enzymatic Labeling of DNA	640
2. Chemical Modification of Nucleic Acids and Oligonucleotides	643
2.1. Diamine or Bis-hydrazide Modification of DNA	644
Via Bisulfite Activation of Cytosine	645
Via Bromine Activation of Thymine, Guanine, and Cytosine	647
Via Carbodiimide Reaction with 5' Phosphates of DNA (Phosphoramidate Formation)	649
2.2. Sulfhydryl Modification of DNA	651
Cystamine Modification of 5' Phosphate Groups Using EDC	651
SPDP Modification of Amines on Nucleotides	652
SATA Modification of Amines on Nucleotides	654
2.3. Biotin Labeling of DNA	656
Biotin-LC-dUTP	656
Photo-Biotin Modification of DNA	657
Reaction of NHS-LC-Biotin with Diamine-Modified DNA Probes	658
Biotin-Diazonium Modification of DNA	658
Reaction of Biotin-BMCC with Sulfhydryl-Modified DNA	660
Biotin-Hydrazide Modification of Bisulfite-Activated Cytosine Groups	661
2.4. Enzyme Conjugation to DNA	662
Alkaline Phosphatase Conjugation to Cystamine-Modified DNA Using Amine- and Sulfhydryl-Reactive Heterobifunctional Cross-linkers	663
Alkaline Phosphatase Conjugation to Diamine-Modified DNA Using DSS	664
Enzyme Conjugation to Diamine-Modified DNA Using PDITC	666
Conjugation of SFB-Modified Alkaline Phosphatase to Bis-hydrazide-Modified Oligonucleotides	668
2.5. Fluorescent Labeling of DNA	668
Conjugation of Amine-Reactive Fluorescent Probes to Diamine-Modified DNA	670
Conjugation of Sulfhydryl-Reactive Fluorescent Probes to Sulfhydryl-Modified DNA	671
